# Brainstorming

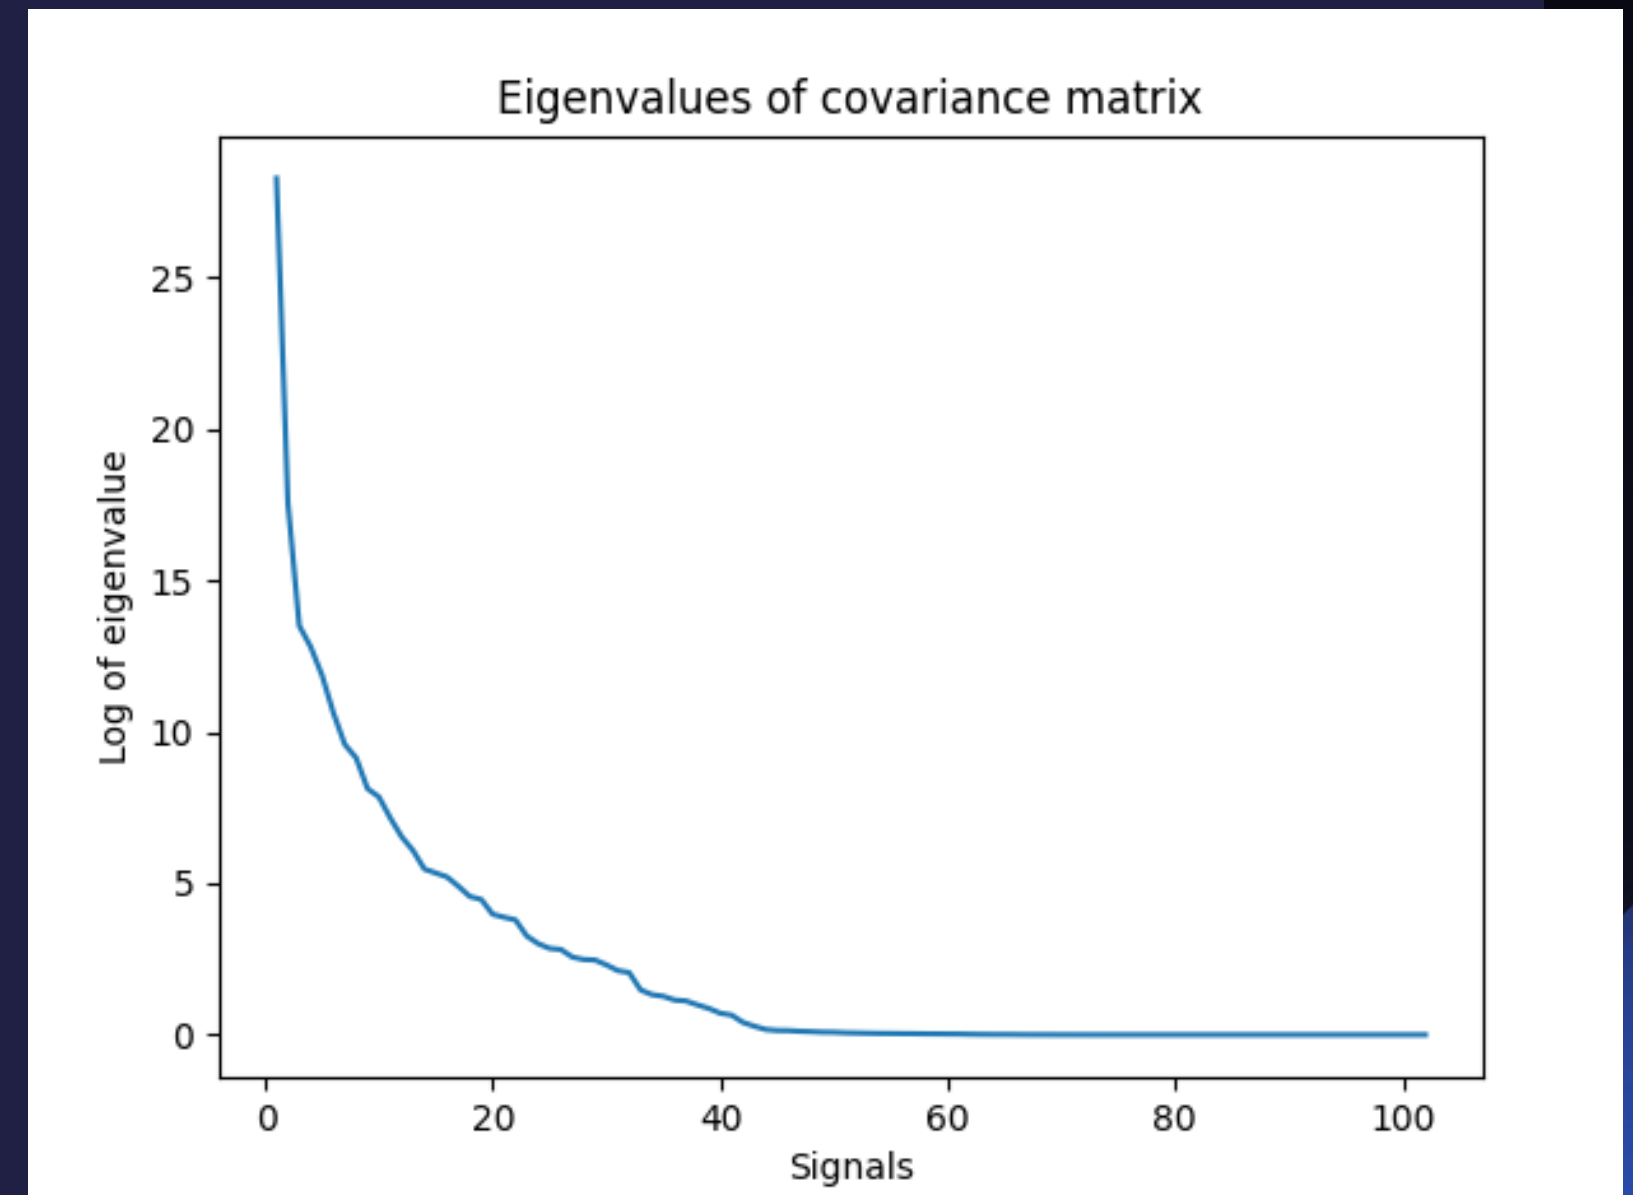

## Principal Component Analysis

We find the signals in the data that contain the most information. This is done by calculating the eigenvalues of the covariance matrix

---

This is an unsupervised method to filter out unnecessary data.

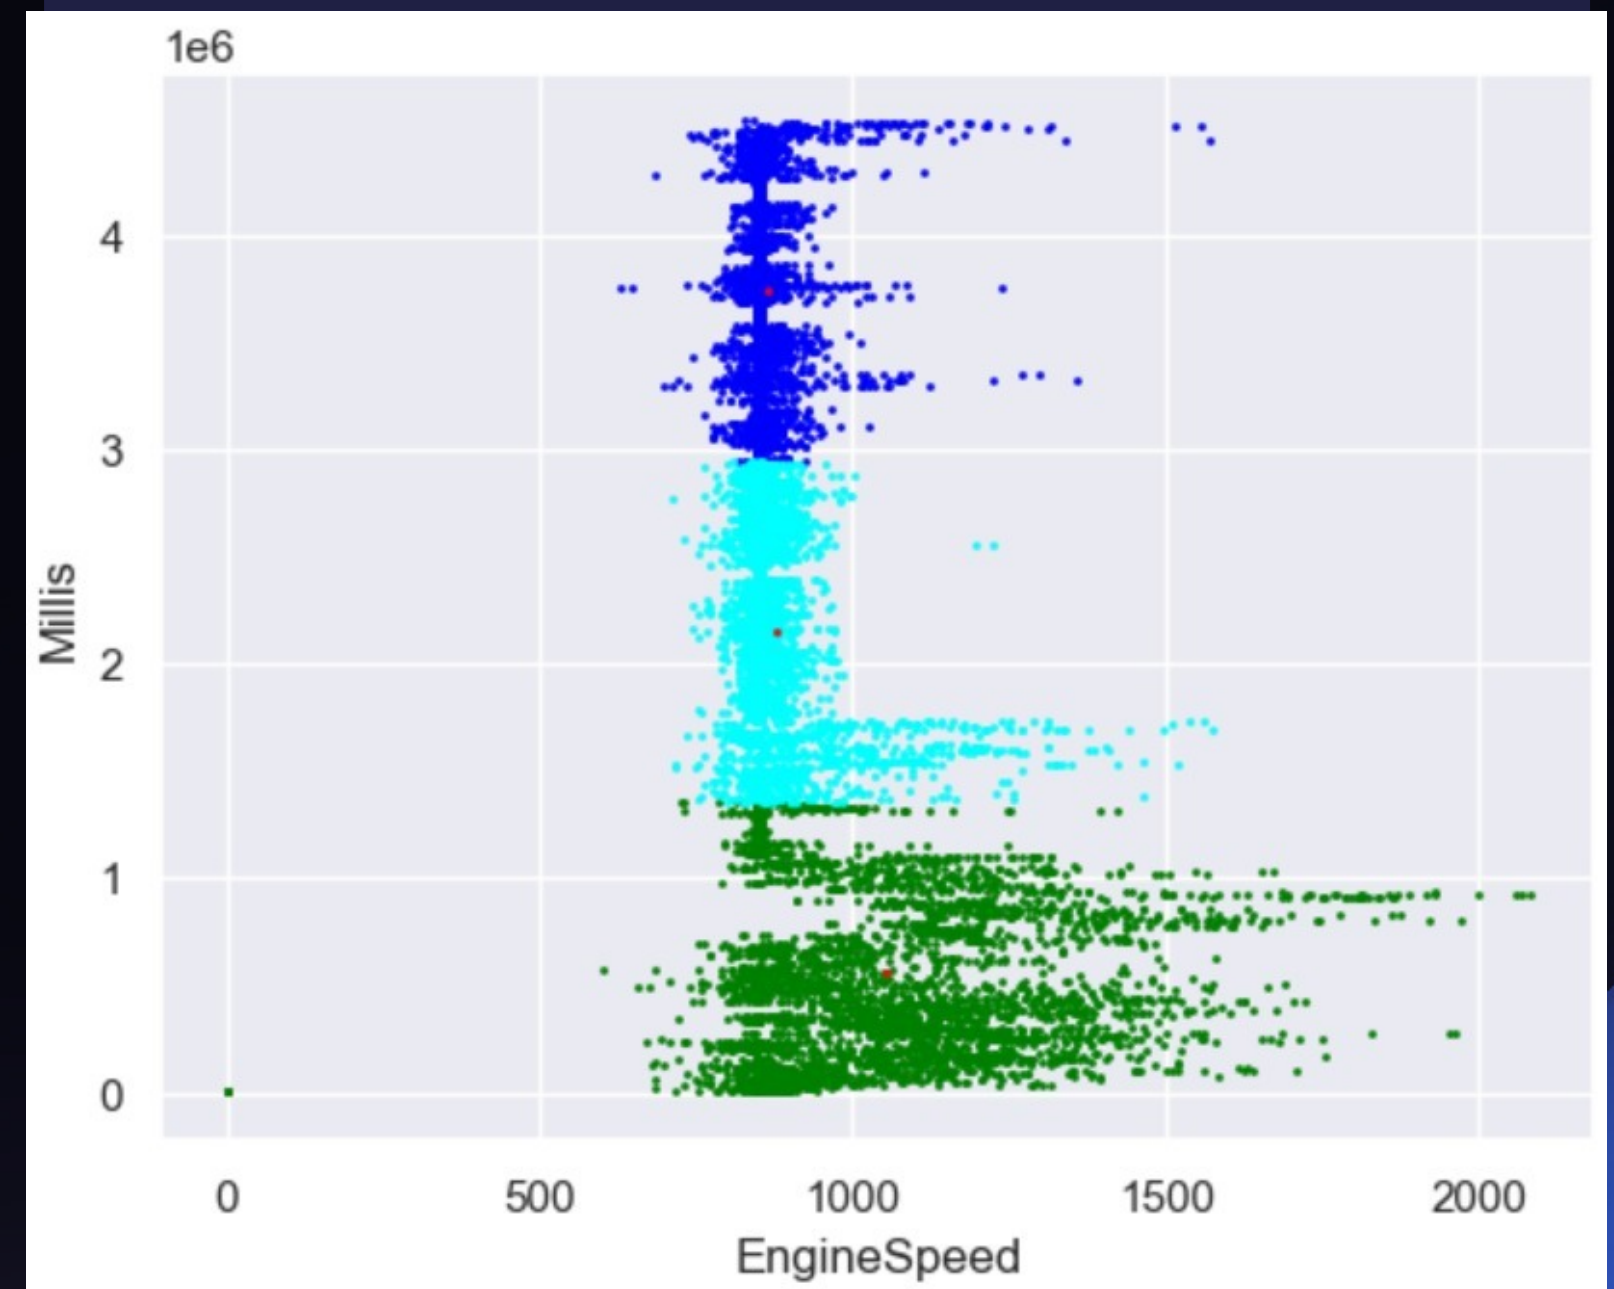

## K-means Clustering

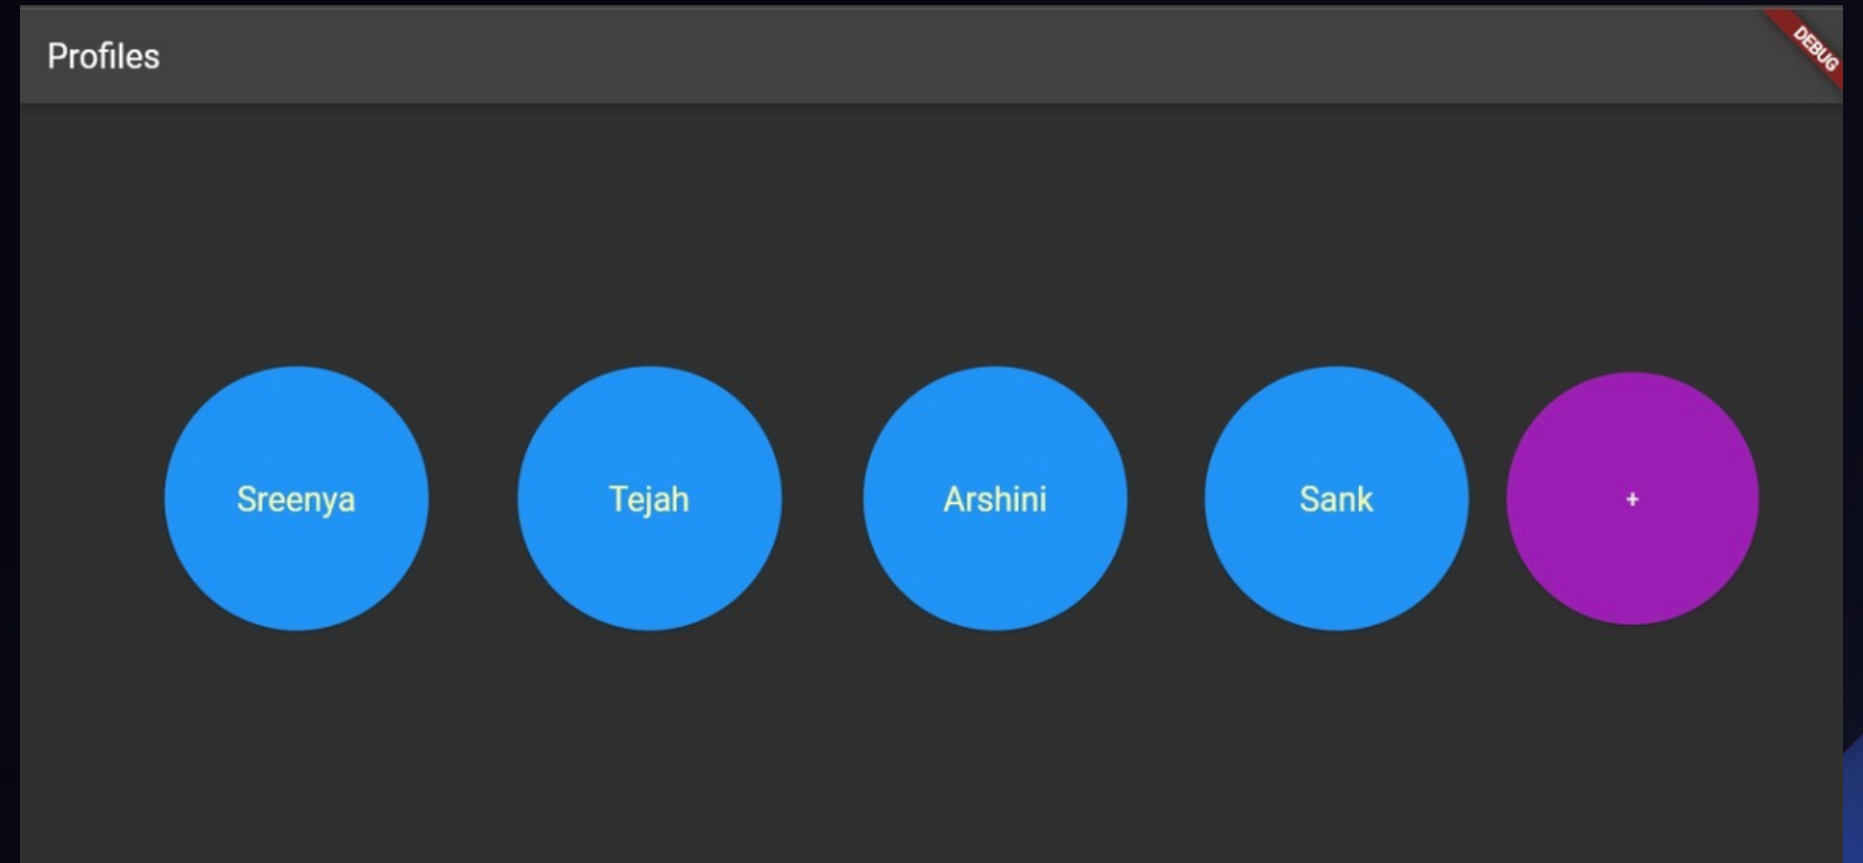

We find clusters in data to recognize certain patterns. This may include weather conditions, driver health, road conditions etc.

---

This is an unsupervised method to get insights on the available data without manually finding patterns.

# Profiles for Each Driver

- Each user can make a profile.
- The homepage for each profile is created.
- It displays the progress bar for depicting the time to reach destination
- The number of badges are also displayed which can be attained through the achievements unlocked.
- An indicator also shows how well we are driving.

# Different Features

Can show the achievements of each profile. Gives rewards based on them. Displays the leaderboard.

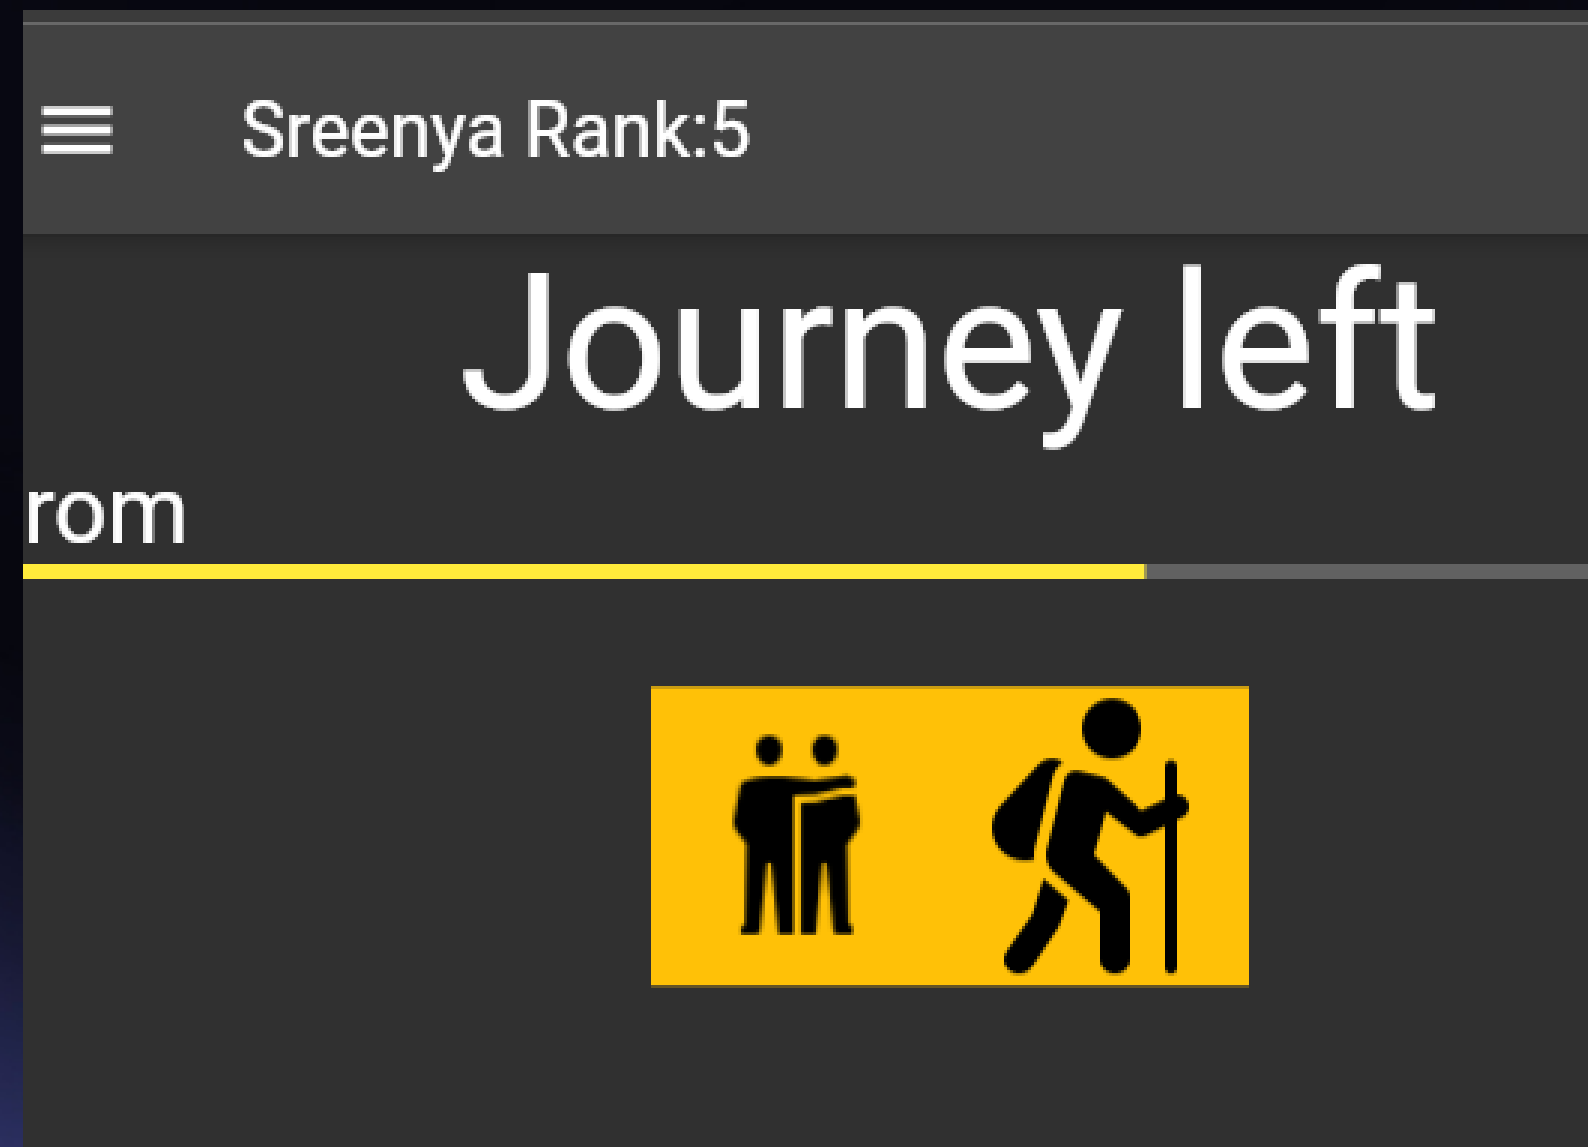

Uses data like efficiency of driving, number of trips etc.

# Rewards

Displays the rank of each user at the top.

Gives new badges on unlocking new achievements!

# Achievements

Shows the achievements unlocked by specific user

Awarded upon reaching certain milestones which can be inferred from the data.
